## Structural Repairs

The team of boilermakers at BSE Cairns Slipways is proficient in aluminium, steel and stainless structural repairs. The majority of our team were trained by our previous Parent Company NQEA Australia, award-winning shipbuilders. The knowledge and training received from this background ensure the high level of workmanship required for ship repair.

We can carry out anything from hull plating repairs to repair and replacement of all types of pipe work, steel, stainless, aluminium, copper nickel etc.

We also specialise in modifications to engine beds, tank repairs, cosmetic stainless polishing, balustrades and bollards etc.

Repairs are carried out to requirements of Lloyds, ABS, DNV, BV and Australian, American and British Navy standards.
